Executive KPI Dashboard — $7.6B Portfolio Overview

Comprehensive analysis of 548,400 vehicle transactions across 96 unique brands and 38 US states.

TOTAL REVENUE	VEHICLES SOLD	AVG SELLING PRICE
$7.6B	**548K**	**$13,611**
All vehicles combined	Individual transactions	Per vehicle unit

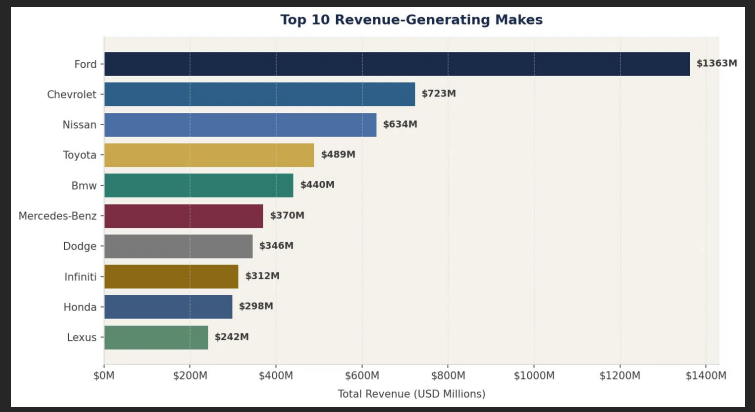
UNIQUE BRANDS	STATES COVERED	TOP REVENUE STATE
96	**38**	**Florida**
Makes tracked in dataset	Active US regions	$1.15B in total sales

Strategic Insight: While top-line revenue is robust at $7.6B, volume is heavily concentrated in sedans (~44%). Shifting inventory focus toward SUVs, which command 37% higher average prices, represents a primary revenue optimization lever.

Revenue Leaders — Ford Dominates the Market

> **Ford generates $1.36 billion in revenue, leading the market with 93,553 units sold, followed by Chevrolet and Nissan.**

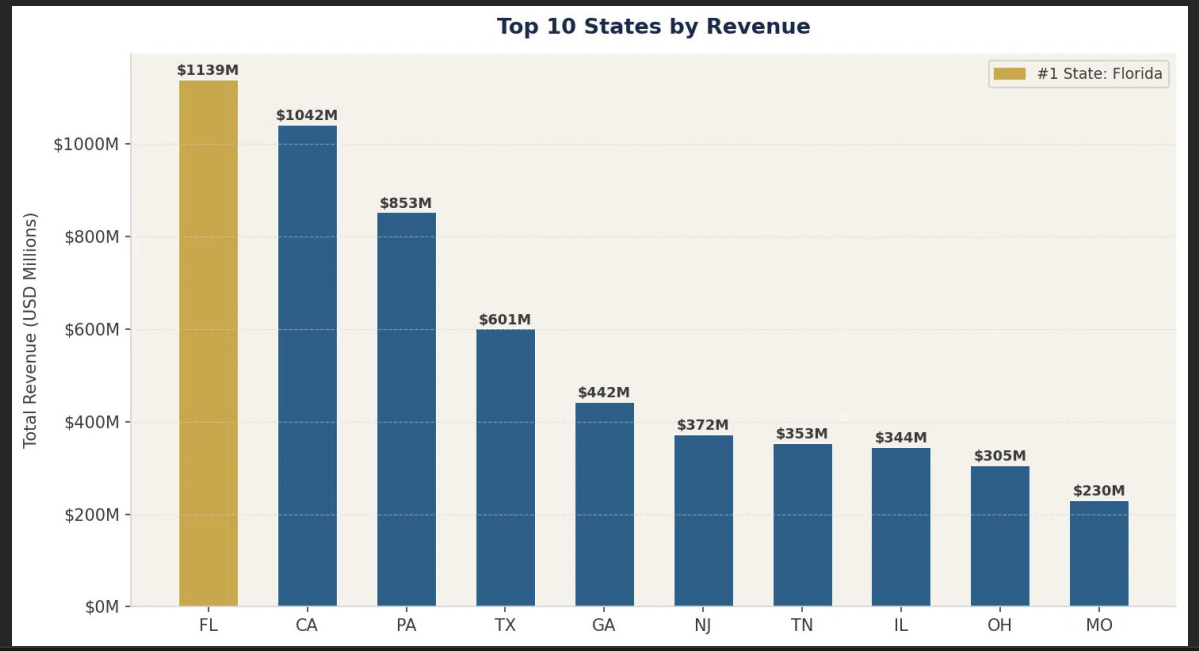
- **Top Make:** Ford leads the portfolio with $1,360M in total revenue.
- **Top Model:** The Ford F-150 is the primary revenue driver at $272.7M.
- **Volume Runner-up:** Nissan Altima follows as a key revenue contributor at $221.0M.
- **Premium Opportunity:** BMW and Mercedes achieve significantly higher average selling prices (~$21.5K) compared to volume brands.



Regional Performance — Florida & California as Hubs

Florida and California dominate regional performance, together accounting for 28% of total revenue ($2.2B).

- **Revenue Leader:** Florida leads the nation with $1.15B in sales.
- **Premium Markets:** Tennessee and Pennsylvania lead in average selling price ($17,010 and $15,976 respectively).
- **Opportunity:** Targeted inventory allocation for these high-value states can maximize ROI per unit.



STRATEGIC IMPLICATION

Geographic diversification is essential. Replicating the high-value sourcing models of Tennessee and Pennsylvania in larger markets like Florida is a top priority.

Portfolio Mix — Sedans & SUVs Core

Sedans dominate volume (44%), but SUVs command a 37% higher average price, making them the primary revenue driver.

SEDAN SEGMENT

241,332 Units Sold

Volume leader. Average selling price: $11,594. Significant volume-to-revenue efficiency gap.

SUV SEGMENT

143,844 Units Sold

Profitability leader. Average selling price: $15,906. Higher condition scores drive stronger margins.

Strategic Lever: Prioritizing SUV inventory over sedans can significantly increase revenue per unit sold and improve overall portfolio health.

Price, Mileage & Year Relationship

Average vehicle price grows 4.2× from 2006 ($6,190) to 2015 ($25,966).

AVG PRICE GROWTH (2006-2015)

$6,190 → $25,966

INVENTORY FOCUS

Low Mileage Units

Under 30,000 miles command peak premium

STRATEGIC IMPLICATION

Stocking more recent model-year vehicles (2013+) with low mileage is the single most impactful lever for increasing revenue per unit.

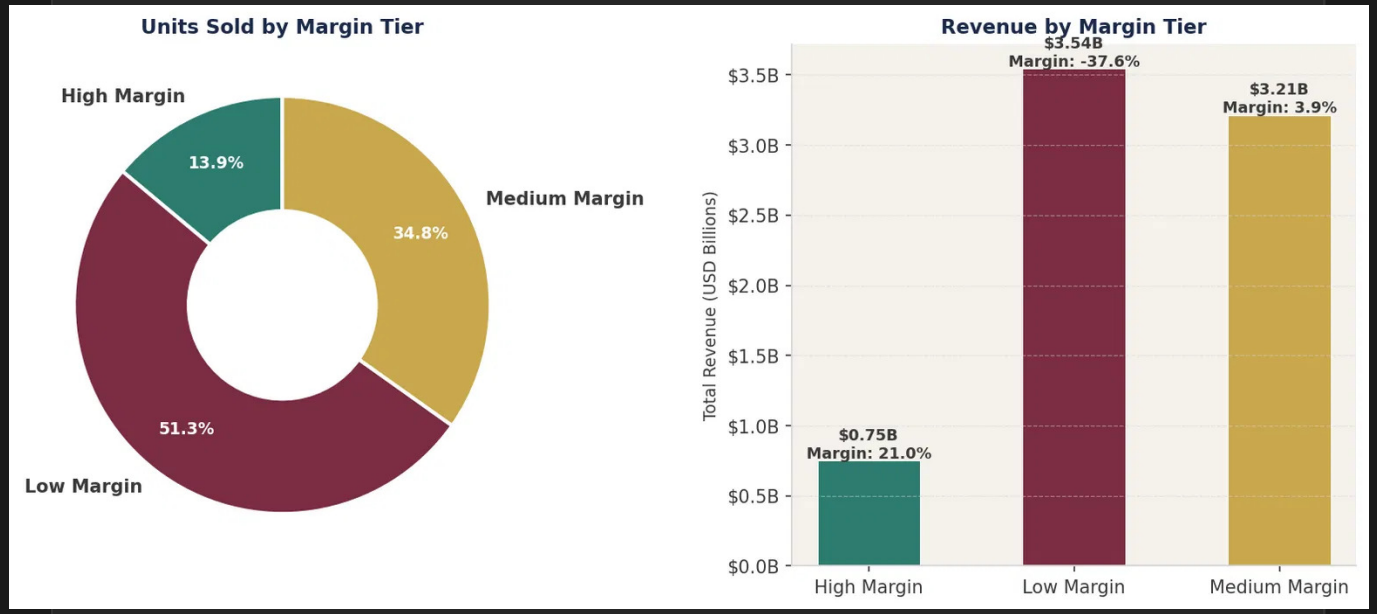
MODEL YEAR	AVG SELLING PRICE	AVG MILEAGE	CONDITION SCORE
2015	**$25,966**	12,400 mi	Peak (40+)
2013	$17,477	42,100 mi	High
2012	$16,654	58,900 mi	Strong
2010	$12,412	84,200 mi	Medium
2008	$9,508	105,600 mi	Medium
2006	$6,190	132,000 mi	Legacy

∗Vehicles under 30,000 miles command a significant premium across all model years.

Profitability Crisis — Margin Tier Analysis

Over 54% of the vehicle portfolio operates at a significant loss, highlighting a critical profitability challenge.

- **High Margin (>10%):** 79K units (14.4% of stock). The profitable core of the business.
- **Medium Margin (0-10%):** 182K units (33.2% of stock). Near-breakeven performance.
- **Low Margin (<0%):** 298K units (54.4% of stock). Primary driver of value destruction.
- **Recommendation:** Implement a margin floor policy to avoid purchases where projected margin falls below 5%.



STRATEGIC IMPLICATION

The portfolio is structurally skewed toward loss-making inventory. Disciplined sourcing and focusing on condition-scored 40+ vehicles is the highest-impact lever for recovery.

Strategic Recommendations — Five Levers for Success

BrightMotors has the scale to achieve profitability by shifting from a revenue-led to a margin-led growth model through five targeted interventions.

	RECOMMENDATION	EXPECTED IMPACT
1	Increase near-luxury inventory (Infiniti, BMW, Mercedes)	**Lift avg margin by 3–5 pts**
2	Audit & reprice Texas and California inventory immediately	**Recover regional margin drag**
3	Shift sourcing focus to 2011–2013 "sweet spot" model years	**Optimize volume-margin balance**
4	Grow SUV share vs. low-margin hatchbacks	**Improve segment margin mix**
5	Implement margin-tier KPI targets per dealership	**Drive sales accountability**

Closing Insight: With $7.5B in revenue and 38-state coverage, BrightMotors is positioned to lead. Disciplined portfolio management and a shift toward higher-margin inventory will transform scale into sustainable profit.

Appendix & Methodology

DATA SOURCE

BrightMotors Internal Transactional Database. Analysis covers multi-year historical sales data (2006–2015) across 38 US states, 96 unique brands, and 548K individual vehicle transactions.

ANALYSIS METHODOLOGY

Professional data cleaning and transformation applied to ensure numerical accuracy. Statistical analysis focused on revenue concentration, regional performance hubs, and margin tier distribution to drive strategic decision-making.
